

Storyboard for Project09

Team 03

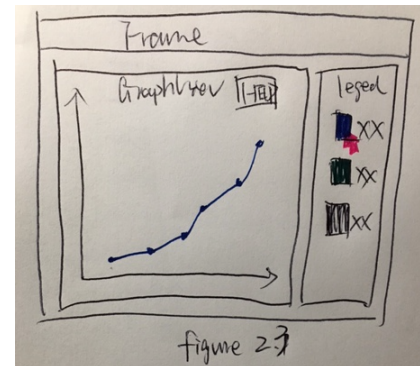

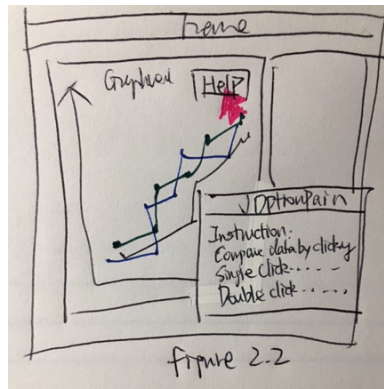

Feature1: Hover Over

To keep the graph clear and readable, we hide the label with year and subscription data as default. When user wants to show the specific data information, there are two ways:

- As figure 1.1, user can use mouse hover over specific dots in the graph to get one data
- As figure 1.2, if user wants to get the specific data for a whole country, he can use mouse hover over the either country name or colored rounded rectangles to show them.

Feature2: Compare Data by Click

When there are too many country data showed in the Graph, the clustered view may distract User to find the data he really needs. Thus, we create a feature that he can click specific country to show the particular data for that country. He can also compare the data trend by clicking the countries he wants to compare.

- As figure 2.1, a "Help" button will give user instruction
- As figure 2.2, when click "Help", a dialog jumped out to give clicking instructions
- As figure 2.3, click the country with blue rectangles to show data in blue line.
- As figure 2.4, click the country with green rectangles to show data in green line
